SUMMARY

Computer Science (Software Engineering) student at Universiti Malaya (CGPA: 3.83/4.00) with hands-on experience building web and mobile applications, interested in Software Engineering, Full-Stack, Backend and Mobile Application Development. Seeking a 24-week internship with a flexible start date between 25 January and the end of February 2027 to apply my technical skills and contribute to real-world projects.

EDUCATION

Universiti Malaya *2023 – 2027*

Bachelor of Computer Science (Software Engineering) | CGPA: 3.83/4.00

Relevant Coursework: Algorithm Design & Analysis, Operating Systems, Database, Machine Learning, Software Testing

PROJECTS

SmartClass – Smart Classroom Management System | Final Year Project - Source Code Ongoing

Technologies: *React Native, Expo, FastAPI, PostgreSQL, InsightFace, Docker, OpenAI API*

- Developing a cross-platform classroom management system with web and mobile applications for lecturers and students.
- Implementing role-based access control (RBAC) and integrated AI-powered classroom workflows, including attendance management, facial recognition-based identity verification, classroom interaction, online quizzes, learning analytics, and personalized learning recommendations.
- Building the application stack with React Native frontend, FastAPI backend services and PostgreSQL data storage.

Wick – Stress & Workload Manager | Hackathon Project - Source Code September 2026

Technologies: *React Native, Expo, TypeScript, Supabase, EAS Hosting, OpenAI API*

- Developed a mobile app concept that combines calendar/task workload, camera-based physiological signals and self-reported check-ins to provide students with workload and stress insights.
- Worked on workload categorization and capacity scoring, AI-assisted task quick-add, load-balancing recommendations, recovery planning and social accountability features.
- Integrated React Native frontend, Supabase authentication and database services and explored on-device rPPG signal processing.

PathSeeker – Job Recruitment & Well-Being Platform | Academic Assignment - Source Code January 2025

Technologies: *Android Studio, Java, Firebase, Google Maps API*

- Developed an Android mobile recruitment application connecting job seekers with recruiters through personalized job recommendations and integrated skill development courses.
- Implemented Firebase-backed data management and integrated Google Maps API to support location-based job discovery.

Hacking The Future – Gamified STEM Learning Platform | Academic Assignment - Source Code July 2024

Technologies: *Java, JavaFX, SQLite*

- Built a JavaFX desktop application for students, parents and educators, featuring STEM quizzes, event registration, destination bookings, discussion forums, friendships and leaderboards.
- Implemented role-based features, event scheduling with clash detection, parent-child account relationships, reward-point tracking, SHA-3 password hashing and email notifications.

COMPETITIONS & AWARDS

- Design Duel 2025 — 2nd runner-up
- Programming League National (PLN) 2025 — National Top 15 Finalist

SKILLS

Programming: Java, HTML, CSS, JavaScript, TypeScript, Python, SQL
Frameworks: React Native, Node.js, FastAPI
Databases: Firebase, MongoDB, MySQL, PostgreSQL
Testing: Manual & Automated (Selenium, Appium), Black-Box Testing (Equivalence Partitioning, BVA, Decision Table)
Tools & APIs: Git, Figma, Docker, Jira, OpenAI
Languages: Chinese, English, Malay
